tf.keras.models.model_from_yaml

```
model_from_yaml(
    yaml_string,
    custom_objects=None
)
```

Defined in `tensorflow/python/keras/_impl/keras/models.py`.

Parses a yaml model configuration file and returns a model instance.

Arguments:

- `yaml_string`: YAML string encoding a model configuration.
- `custom_objects`: Optional dictionary mapping names (strings) to custom classes or functions to be considered during deserialization.

Returns:

A Keras model instance (uncompiled).

Raises:

- `ImportError`: if yaml module is not found.
