

tf.contrib.graph_editor.placeholder_name

```
placeholder_name(  
    t=None,  
    scope=None  
)
```

Defined in [tensorflow/contrib/graph_editor/util.py](#).

See the guide: [Graph Editor \(contrib\)](#) > [Module: util](#)

Create placeholder name for the graph editor.

Args:

- `t`: optional tensor on which the placeholder operation's name will be based on
- `scope`: absolute scope with which to prefix the placeholder's name. None means that the scope of `t` is preserved. "" means the root scope.

Returns:

A new placeholder name prefixed by "geph". Note that "geph" stands for Graph Editor Placeholder. This convention allows to quickly identify the placeholder generated by the Graph Editor.

Raises:

- `TypeError`: if `t` is not None or a `tf.Tensor`.
