

tf.keras.optimizers.SGD

Contents

Class SGD

Methods

`__init__``from_config`Class **SGD**Inherits From: [Optimizer](#)Defined in [tensorflow/python/keras/_impl/keras/optimizers.py](#).

Stochastic gradient descent optimizer.

Includes support for momentum, learning rate decay, and Nesterov momentum.

Arguments:

- `lr`: float >= 0. Learning rate.
- `momentum`: float >= 0. Parameter updates momentum.
- `decay`: float >= 0. Learning rate decay over each update.
- `nesterov`: boolean. Whether to apply Nesterov momentum.

Methods

`__init__`

```
__init__(  
    lr=0.01,  
    momentum=0.0,  
    decay=0.0,  
    nesterov=False,  
    **kwargs  
)
```

`from_config`

```
from_config(  
    cls,  
    config  
)
```

get_config

```
get_config()
```

get_gradients

```
get_gradients(  
    loss,  
    params  
)
```

get_updates

```
get_updates(  
    loss,  
    params  
)
```

get_weights

```
get_weights()
```

Returns the current value of the weights of the optimizer.

Returns:

A list of numpy arrays.

set_weights

```
set_weights(weights)
```

Sets the weights of the optimizer, from Numpy arrays.

Should only be called after computing the gradients (otherwise the optimizer has no weights).

Arguments:

- **weights**: a list of Numpy arrays. The number of arrays and their shape must match number of the dimensions of the weights of the optimizer (i.e. it should match the output of **get_weights**).

Raises:

- **ValueError**: in case of incompatible weight shapes.
