

tf.keras.backend.arange

```
arange(  
    start,  
    stop=None,  
    step=1,  
    dtype='int32'  
)
```

Defined in [tensorflow/python/keras/_impl/keras/backend.py](#).

Creates a 1D tensor containing a sequence of integers.

The function arguments use the same convention as Theano's `arange`: if only one argument is provided, it is in fact the "stop" argument.

The default type of the returned tensor is `'int32'` to match TensorFlow's default.

Arguments:

- `start` : Start value.
- `stop` : Stop value.
- `step` : Difference between two successive values.
- `dtype` : Integer dtype to use.

Returns:

An integer tensor.
