

## tf.keras.backend.manual\_variable\_initialization

```
manual_variable_initialization(value)
```

Defined in [tensorflow/python/keras/\\_impl/keras/backend.py](#).

Sets the manual variable initialization flag.

This boolean flag determines whether variables should be initialized as they are instantiated (default), or if the user should handle the initialization (e.g. via `tf.initialize_all_variables()`).

### Arguments:

- `value`: Python boolean.
