

Module: tf.contrib.image

Contents

API

Functions

Defined in [tensorflow/contrib/image/__init__.py](#).

Ops for image manipulation.

API

This module provides functions for image manipulation; currently, chrominance transforms (including changing saturation and hue) in YIQ space and projective transforms (including rotation) are supported.

Functions

[angles_to_projective_transforms\(...\)](#) : Returns projective transform(s) for the given angle(s).

[compose_transforms\(...\)](#) : Composes the transforms tensors.

[rotate\(...\)](#) : Rotate image(s) by the passed angle(s) in radians.

[single_image_random_dot_stereograms\(...\)](#) : Output a RandomDotStereogram Tensor for export via encode_PNG/JPG OP.

[transform\(...\)](#) : Applies the given transform(s) to the image(s).
