

## tf.get\_default\_graph

```
get_default_graph()
```

Defined in [tensorflow/python/framework/ops.py](#).

See the guide: [Building Graphs > Utility functions](#)

Returns the default graph for the current thread.

The returned graph will be the innermost graph on which a `Graph.as_default()` context has been entered, or a global default graph if none has been explicitly created.

NOTE: The default graph is a property of the current thread. If you create a new thread, and wish to use the default graph in that thread, you must explicitly add a `with g.as_default():` in that thread's function.

### Returns:

The default `Graph` being used in the current thread.
