

tf.contrib.framework.get_variables_by_name

```
get_variables_by_name(  
    given_name,  
    scope=None  
)
```

Defined in [tensorflow/contrib/framework/python/ops/variables.py](#).

See the guide: [Framework \(contrib\) > Variables](#)

Gets the list of variables that were given that name.

Args:

- `given_name` : name given to the variable without any scope.
- `scope` : an optional scope for filtering the variables to return.

Returns:

a copied list of variables with the given name and scope.
