

tf.saved_model.loader.maybe_saved_model_directory

```
maybe_saved_model_directory(export_dir)
```

Defined in [tensorflow/python/saved_model/loader_impl.py](#).

Checks whether the provided export directory could contain a SavedModel.

Note that the method does not load any data by itself. If the method returns `false`, the export directory definitely does not contain a SavedModel. If the method returns `true`, the export directory may contain a SavedModel but provides no guarantee that it can be loaded.

Args:

- `export_dir`: Absolute string path to possible export location. For example, `'/my/foo/model'`.

Returns:

True if the export directory contains SavedModel files, False otherwise.
