

tf.contrib.framework.get_name_scope

`get_name_scope()`

Defined in [tensorflow/contrib/framework/python/ops/ops.py](#).

Returns the current name scope of the default graph.

For example:

```
with tf.name_scope('scope1'):
    with tf.name_scope('scope2'):
        print(tf.contrib.framework.get_name_scope())
```

would print the string `scope1/scope2`.

Returns:

A string representing the current name scope.
