

## tf.contrib.graph\_editor.make\_placeholder\_from\_tensor

```
make_placeholder_from_tensor(  
    t,  
    scope=None  
)
```

Defined in [tensorflow/contrib/graph\\_editor/util.py](#).

See the guide: [Graph Editor \(contrib\)](#) > [Module: util](#)

Create a **tf.placeholder** for the Graph Editor.

Note that the correct graph scope must be set by the calling function.

## Args:

- **t** : a **tf.Tensor** whose name will be used to create the placeholder (see function `placeholder_name`).
- **scope** : absolute scope within which to create the placeholder. `None` means that the scope of **t** is preserved. `""` means the root scope.

## Returns:

A newly created **tf.placeholder**.

## Raises:

- **TypeError** : if **t** is not **None** or a **tf.Tensor**.
