

tf.get_collection_ref

```
get_collection_ref(key)
```

Defined in [tensorflow/python/framework/ops.py](#).

See the guide: [Building Graphs > Graph collections](#)

Wrapper for `Graph.get_collection_ref()` using the default graph.

See [tf.Graph.get_collection_ref](#) for more details.

Args:

- **key**: The key for the collection. For example, the `GraphKeys` class contains many standard names for collections.

Returns:

The list of values in the collection with the given **name**, or an empty list if no value has been added to that collection. Note that this returns the collection list itself, which can be modified in place to change the collection.
