

tf.sparse_segment_sqrt_n

```
sparse_segment_sqrt_n(  
    data,  
    indices,  
    segment_ids,  
    name=None  
)
```

Defined in `tensorflow/python/ops/gen_math_ops.py`.

See the guide: [Math > Segmentation](#)

Computes the sum along sparse segments of a tensor divided by the sqrt of N.

N is the size of the segment being reduced.

Read [the section on segmentation](#) for an explanation of segments.

Args:

- `data`: A `Tensor`. Must be one of the following types: `float32`, `float64`.
- `indices`: A `Tensor`. Must be one of the following types: `int32`, `int64`. A 1-D tensor. Has same rank as `segment_ids`.
- `segment_ids`: A `Tensor` of type `int32`. A 1-D tensor. Values should be sorted and can be repeated.
- `name`: A name for the operation (optional).

Returns:

A `Tensor`. Has the same type as `data`. Has same shape as data, except for dimension 0 which has size `k`, the number of segments.
