

tf.errors.AbortedError

Contents

Class AbortedError

Properties

error_code

message

Class **AbortedError**Inherits From: [OpError](#)Defined in [tensorflow/python/framework/errors_impl.py](#).See the guide: [Running Graphs > Error classes and convenience functions](#)

The operation was aborted, typically due to a concurrent action.

For example, running a [tf.QueueBase.enqueue](#) operation may raise **AbortedError** if a [tf.QueueBase.close](#) operation previously ran.

Properties

error_code

The integer error code that describes the error.

message

The error message that describes the error.

node_defThe **NodeDef** proto representing the op that failed.**op**

The operation that failed, if known.

N.B. If the failed op was synthesized at runtime, e.g. a **Send** or **Recv** op, there will be no corresponding [tf.Operation](#) object. In that case, this will return **None**, and you should instead use the [tf.OpError.node_def](#) to discover information about the op.

Returns:

The **Operation** that failed, or None.

Methods

`__init__`

```
__init__(
    node_def,
    op,
    message
)
```

Creates an **AbortedError** .
