

tf.placeholder_with_default

```
placeholder_with_default(  
    input,  
    shape,  
    name=None  
)
```

Defined in `tensorflow/python/ops/gen_array_ops.py`.

See the guide: [Inputs and Readers > Placeholders](#)

A placeholder op that passes through `input` when its output is not fed.

Args:

- `input`: A `Tensor`. The default value to produce when `output` is not fed.
- `shape`: A `tf.TensorShape` or list of `ints`. The (possibly partial) shape of the tensor.
- `name`: A name for the operation (optional).

Returns:

A `Tensor`. Has the same type as `input`. A placeholder tensor that defaults to `input` if it is not fed.
