

tf.keras.models.model_from_config

```
model_from_config(  
    config,  
    custom_objects=None  
)
```

Defined in [tensorflow/python/keras/_impl/keras/models.py](#).

Instantiates a Keras model from its config.

Arguments:

- `config`: Configuration dictionary.
- `custom_objects`: Optional dictionary mapping names (strings) to custom classes or functions to be considered during deserialization.

Returns:

A Keras model instance (uncompiled).

Raises:

- `TypeError`: if `config` is not a dictionary.
