

tf.contrib.framework.get_variable_full_name

```
get_variable_full_name(var)
```

Defined in [tensorflow/contrib/framework/python/ops/variables.py](#).

Returns the full name of a variable.

For normal Variables, this is the same as the var.op.name. For sliced or PartitionedVariables, this name is the same for all the slices/partitions. In both cases, this is normally the name used in a checkpoint file.

Args:

- `var`: A **Variable** object.

Returns:

A string that is the full name.
