

tf.get_default_session

```
get_default_session()
```

Defined in [tensorflow/python/framework/ops.py](#).

See the guide: [Running Graphs > Session management](#)

Returns the default session for the current thread.

The returned `Session` will be the innermost session on which a `Session` or `Session.as_default()` context has been entered.

NOTE: The default session is a property of the current thread. If you create a new thread, and wish to use the default session in that thread, you must explicitly add a `with sess.as_default():` in that thread's function.

Returns:

The default `Session` being used in the current thread.
