

tf.round

```
round(  
    x,  
    name=None  
)
```

Defined in [tensorflow/python/ops/math_ops.py](#).

See the guide: [Math > Basic Math Functions](#)

Rounds the values of a tensor to the nearest integer, element-wise.

Rounds half to even. Also known as bankers rounding. If you want to round according to the current system rounding mode use `tf::cint`. For example:

```
x = tf.constant([0.9, 2.5, 2.3, 1.5, -4.5])  
tf.round(x) # [ 1.0, 2.0, 2.0, 2.0, -4.0 ]
```

Args:

- `x`: A **Tensor** of type **float32** or **float64**.
- `name`: A name for the operation (optional).

Returns:

A **Tensor** of same shape and type as `x`.
