

tf.contrib.layers.l2_regularizer

```
l2_regularizer(  
    scale,  
    scope=None  
)
```

Defined in [tensorflow/contrib/layers/python/layers/regularizers.py](#).

See the guide: [Layers \(contrib\) > Regularizers](#)

Returns a function that can be used to apply L2 regularization to weights.

Small values of L2 can help prevent overfitting the training data.

Args:

- **scale** : A scalar multiplier **Tensor**. 0.0 disables the regularizer.
- **scope** : An optional scope name.

Returns:

A function with signature **l2(weights)** that applies L2 regularization.

Raises:

- **ValueError** : If scale is negative or if scale is not a float.
