

tf.is_variable_initialized

```
is_variable_initialized(variable)
```

Defined in [tensorflow/python/ops/variables.py](#).

See the guide: [Variables > Variable helper functions](#)

Tests if a variable has been initialized.

Args:

- `variable`: A **Variable**.

Returns:

Returns a scalar boolean Tensor, **True** if the variable has been initialized, **False** otherwise.

NOTE The output of this function should be used. If it is not, a warning will be logged. To mark the output as used, call its `.mark_used()` method.
