

tf.keras.backend.get_session

```
get_session()
```

Defined in `tensorflow/python/keras/_impl/keras/backend.py`.

Returns the TF session to be used by the backend.

If a default TensorFlow session is available, we will return it.

Else, we will return the global Keras session.

If no global Keras session exists at this point: we will create a new global session.

Note that you can manually set the global session via `K.set_session(sess)`.

Returns:

A TensorFlow session.
