### TancarFlow

TensorFlow API r1.4

# tf.truncatemod

```
truncatemod(
    x,
    y,
    name=None
)
```

Defined in tensorflow/python/ops/gen\_math\_ops.py.

See the guide: Math > Arithmetic Operators

Returns element-wise remainder of division. This emulates C semantics in that

the result here is consistent with a truncating divide. E.g.  $truncate(x / y) * y + truncate_mod(x, y) = x$ .

NOTE: TruncateMod supports broadcasting. More about broadcasting here

## Args:

- x: A Tensor. Must be one of the following types: int32, int64, float32, float64.
- y: A Tensor. Must have the same type as x.
- name: A name for the operation (optional).

### Returns:

A **Tensor** . Has the same type as x .
