TensorFlow   API r1.4

tf.contrib.layers.one_hot_column

```
one_hot_column(sparse_id_column)
```

Defined in **tensorflow/contrib/layers/python/layers/feature_column.py** .

See the guide: Layers (contrib) > Feature columns

Creates an `_OneHotColumn` for a one-hot or multi-hot repr in a DNN.

Args:

- `sparse_id_column` : A _SparseColumn which is created by `sparse_column_with_*` or crossed_column functions. Note that `combiner` defined in `sparse_id_column` is ignored.

Returns:

An _OneHotColumn.
