tf.keras.backend.set_floatx

```
set_floatx(value)
```

Defined in `tensorflow/python/keras/_impl/keras/backend.py` .

Sets the default float type.

Arguments:

- `value` : String; 'float16', 'float32', or 'float64'.

Example:

```
>>> from keras import backend as K
>>> K.floatx()
'float32'
>>> K.set_floatx('float16')
>>> K.floatx()
'float16'
```

Raises:

- `ValueError` : In case of invalid value.
