TensorFlow   API r1.4

tf.contrib.tpu.outfeed_enqueue

```
outfeed_enqueue(
    input,
    name=None
)
```

Defined in `tensorflow/contrib/tpu/ops/gen_tpu_ops.py` .

An op which emits a single Tensor value from an XLA computation.

Args:

- `input` : A `Tensor` . A tensor that will be inserted into the outfeed queue.
- `name` : A name for the operation (optional).

Returns:

The created Operation.
