tf.estimator.export.PredictOutput

Class `PredictOutput`

Inherits From: `ExportOutput`

Defined in `tensorflow/python/estimator/export/export_output.py` .

Represents the output of a generic prediction head.

A generic prediction need not be either a classification or a regression.

Named outputs must be provided as a dict from string to `Tensor` ,

Properties

`outputs`

Methods

`__init__`

`__init__(outputs)`

Constructor for PredictOutput.

Args:

* `outputs` : A dict of string to `Tensor` representing the predictions.

Raises:

* `ValueError` : if the outputs is not dict, or any of its keys are not strings, or any of its values are not `Tensor` s.

`as_signature_def`

`as_signature_def(receiver_tensors)`
