tf.group

```
group(
    *inputs,
    **kwargs
)
```

Defined in `tensorflow/python/ops/control_flow_ops.py`.

See the guide: Control Flow > Control Flow Operations

Create an op that groups multiple operations.

When this op finishes, all ops in `input` have finished. This op has no output.

See also tuple and control_dependencies.

Args:

- `*inputs` : Zero or more tensors to group.
- `**kwargs` : Optional parameters to pass when constructing the NodeDef.
- `name` : A name for this operation (optional).

Returns:

An Operation that executes all its inputs.

Raises:

- `ValueError` : If an unknown keyword argument is provided.
