tf.train.match_filenames_once

```
match_filenames_once(
    pattern,
    name=None
)
```

Defined in `tensorflow/python/training/input.py` .

See the guides: Inputs and Readers > Input pipeline, Reading data > Reading from files

Save the list of files matching pattern, so it is only computed once.

Args:

- `pattern` : A file pattern (glob), or 1D tensor of file patterns.
- `name` : A name for the operations (optional).

Returns:

A variable that is initialized to the list of files matching the pattern(s).
