tf.contrib.seq2seq.hardmax

```
hardmax(
    logits,
    name=None
)
```

Defined in **tensorflow/contrib/seq2seq/python/ops/attention_wrapper.py** .

Returns batched one-hot vectors.

The depth index containing the `1` is that of the maximum logit value.

Args:

- `logits` : A batch tensor of logit values.
- `name` : Name to use when creating ops.

Returns:

A batched one-hot tensor.
