tf.contrib.framework.assign_from_values_fn

```
assign_from_values_fn(var_names_to_values)
```

Defined in `tensorflow/contrib/framework/python/ops/variables.py`.

See the guide: Framework (contrib) > Variables

Returns a function that assigns specific variables from the given values.

This function provides a mechanism for performing assignment of variables to values in a way that does not fill the graph with large assignment values.

Args:

- `var_names_to_values` : A map from variable names to values.

Returns:

A function that takes a single argument, a `tf.Session`, that applies the assignment operation.

Raises:

- `ValueError` : if any of the given variable names were not found.
