tf.train.sdca_fprint

```
sdca_fprint(
    input,
    name=None
)
```

Defined in `tensorflow/python/ops/gen_sdca_ops.py`.

Computes fingerprints of the input strings.

Args:

- `input` : A `Tensor` of type `string`. vector of strings to compute fingerprints on.
- `name` : A name for the operation (optional).

Returns:

A `Tensor` of type `int64`. a (N,2) shaped matrix where N is the number of elements in the input vector. Each row contains the low and high parts of the fingerprint.
