TensorFlow   API r1.4

tf.model_variables

```
model_variables(scope=None)
```

Defined in `tensorflow/python/ops/variables.py` .

See the guide: Variables > Variable helper functions

Returns all variables in the MODEL_VARIABLES collection.

Args:

- `scope` : (Optional.) A string. If supplied, the resulting list is filtered to include only items whose `name` attribute matches `scope` using `re.match` . Items without a `name` attribute are never returned if a scope is supplied. The choice of `re.match` means that a `scope` without special tokens filters by prefix.

Returns:

A list of local Variable objects.
