TensorFlow   API r1.4

tf.keras.models.model_from_json

```
model_from_json(
    json_string,
    custom_objects=None
)
```

Defined in `tensorflow/python/keras/_impl/keras/models.py` .

Parses a JSON model configuration file and returns a model instance.

Arguments:

- `json_string` : JSON string encoding a model configuration.
- `custom_objects` : Optional dictionary mapping names (strings) to custom classes or functions to be considered during deserialization.

Returns:

A Keras model instance (uncompiled).
