tf.keras.utils.get_custom_objects

```
get_custom_objects()
```

Defined in **tensorflow/python/keras/_impl/keras/utils/generic_utils.py** .

Retrieves a live reference to the global dictionary of custom objects.

Updating and clearing custom objects using `custom_object_scope` is preferred, but `get_custom_objects` can be used to directly access `_GLOBAL_CUSTOM_OBJECTS` .

Example:

```
get_custom_objects().clear()
get_custom_objects()['MyObject'] = MyObject
```

Returns:

Global dictionary of names to classes (`_GLOBAL_CUSTOM_OBJECTS`).
