TensorFlow   API r1.4

tf.contrib.sparsemax.sparsemax_loss

```
sparsemax_loss(
    logits,
    sparsemax,
    labels,
    name=None
)
```

Defined in `tensorflow/contrib/sparsemax/python/ops/sparsemax_loss.py` .

Computes sparsemax loss function [1].

Args:

- `logits` : A `Tensor` . Must be one of the following types: `half` , `float32` , `float64` .
- `sparsemax` : A `Tensor` . Must have the same type as `logits` .
- `labels` : A `Tensor` . Must have the same type as `logits` .
- `name` : A name for the operation (optional).

Returns:

A `Tensor` . Has the same type as `logits` .
