tf.contrib.copy_graph.get_copied_op

```
get_copied_op(
    org_instance,
    graph,
    scope=''
)
```

Defined in `tensorflow/contrib/copy_graph/python/util/copy_elements.py`.

Given an `Operation` instance from some `Graph`, returns its namesake from `graph`, under the specified scope (default `""`).

If a copy of `org_instance` is present in `graph` under the given `scope`, it will be returned.

Args:

- `org_instance`: An `Operation` from some `Graph`.
- `graph`: The `Graph` to be searched for a copr of `org_instance`.
- `scope`: The scope `org_instance` is present in.

Returns:

The `Operation` copy from `graph`.
