tf.contrib.framework.load_variable

```
load_variable(
    checkpoint_dir,
    name
)
```

Defined in **tensorflow/contrib/framework/python/framework/checkpoint_utils.py** .

See the guide: Framework (contrib) > Checkpoint utilities

Returns a Tensor with the contents of the given variable in the checkpoint.

Args:

- `checkpoint_dir` : Directory with checkpoints file or path to checkpoint.
- `name` : Name of the tensor to return.

Returns:

`Tensor` object.
